DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1, 8 and 13 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 7-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis US 6,367009 in view of Bertram US 5,948,064.

2. As per claims 1, 8, 12, and 13 Davis discloses an MTS or middle tier server, verifying a users ID through a digital certificate submitted by the client, (authentication component), (Col 11 lines 39-43). Davis also discloses the ETS or end tier server verifying the users ID through use of a digital certificate, (Col 13 lines 27-31). Davis teaches that the ETS uses access control comprising a list of authorized users, (directory), (Col 13 lines 35-39). Davis discloses that if the user is not on the access control list, the system will restrict access, (access control system), (Col 13 lines 40-42).

As per claims 2, 9, and 14, Davis teaches that the access policy declares that unauthorized users have access to no portion of the computer site, (Col 13 line 42).

As per claim 7, Davis discloses the computer site is in an extranet, (Col 9 lines 17-19).

As per claim 10, a user would submit a URL request as part of the internet request, (Col 9 lines 14-17).

As per claim 11, Davis discloses sending a digital signature inside a certificate. A digital signature can be decrypted with a public key, (Col 12, line 54).

Davis does not disclose permitting the user access to a portion of a computer site and restricting the user from at least one other portion of the computer site. Davis does not disclose user accounts indicating which portion of the computer site to which the corresponding user is permitted access.

Bertram teaches a system in which a users are permitted access to at least one portion of a computer site. Bertram teaches a database (directory) of user accounts wherein the user is assigned a group and is allowed access to data said group is permitted to access. (Col 5 lines 44-48, Col 6 lines 1-6, Col 8 lines 30-35, 48-53). It would be obvious to one skilled in the art to modify the system of Davis with the user account access control of Bertram because ACL's do not provide the level of security and flexibility that user accounts do.

Claims 4-6, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis US 6,367,009 in view of Bertram US 5,948,064 in view of Ginzboorg US 6,240,091.

As per claims 4, and 16, the previous Davis-Bertram combonation does not teach a log system to record user actions in a computer site.

Art Unit: 2134

Ginzboorg discloses by means of charging records, a log system to record user interaction with a computer site, (Col 8 lines 22-26, Col 11 lines 17-21).

It would have been obvious to one skilled in the art to modify the access policy of Davis with the recording system of Ginzboorg to provide the necessary data for billing purposes (Ginzboorg Col 3 lines 2-4).

As per claims 5, 6, and 17, Davis does not disclose provide a transaction authentication system to produce verified records of transactions performed using the computer site.

Davis does not disclose that the transaction authentication system includes a digital

signing module for validating transactions.

Ginzboorg discloses a system that produces records of transactions using a computer site and verifies these records using digital signatures, (Col 8 lines 30-34, 40-41).

It would have been obvious to one skilled in the art to modify the access policy of Davis with the recording system of Ginzboorg to provide the necessary data for billing purposes (Ginzboorg Col 3 lines 2-4).

Claims 3, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis US 6,367,009 in view of Bertram US 5,948,064 in view of Grimmer US 5,774,552.

As per claim 3, the previous Davis-Bertram combination does not disclose a certificate authority to issue a digital certificate to the user.

Grimmer discloses that a Certificate Authority issues a digital certificate to the user, (Col 5 lines 55-65).

It would be obvious to one skilled in the art to modify the access policy of Davis with the certificate authority of Grimmer, because the Certificate Authority provides a secure trusted source, (Grimmer Col 5 lines 24-27).

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher J. Brown whose telephone number is (571)272-3833. The examiner can normally be reached on 8:30-6:00.

Art Unit: 2134

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Morse can be reached on (571)272-3838. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
